### **1. Foreword**

Fellow Investors,

Welcome to the Lighthouse Advisors newsletter for June 2020.

This newsletter follows the same format as previous issues. The special topic for this issue is **Choose Your Parents Wisely**.

### **2. Market Commentary**

The Covid-19 pandemic has resulted in a bifurcated world. Many countries appear to be managing the outbreak and are cautiously reopening their economies, with “travel bubbles” between countries judged to have similar levels of infections. However, the BEACH (**B**ooking, **E**ntertainment, **A**irlines, **C**ruises, **H**otels) economy remains depressed and on government life support.

The US Federal Reserve has decided that buying corporate bonds will allow issuers to more easily issue debt<sup>1</sup>, and the extra cash would mean fewer layoffs and avert bankruptcies. This is being viewed as a new “Greenspan Put” and has sparked a run in the stock markets. But it also means a collapse of market discipline, since junk bonds will easily find a buyer in the Fed<sup>2</sup>. At some point in

---

<sup>1</sup> *The Fed bought more blue-chip and junk bonds, and has started making Main Street loans, CNBC, 10 Aug 2020.*

<sup>2</sup> *“The Fed Is the Huge Babysitter in the Room”: How the Federal Reserve Enabled a Coronavirus Junk Bond Boom, Vanity Fair, 26 Jun 2020.*

future, when these bonds default en masse, there may be problems.

For now, the US stock market party continues. The Fed may even buy stocks directly. This happened elsewhere before: in 1998 the Hong Kong government rescued its stock market by buying a substantial portfolio of index stocks. This was later unwound via an IPO as the Tracker Fund<sup>3</sup>. The Fed may well do likewise.

In any case, central banks elsewhere already hold substantial amounts of equities: Bloomberg reported in June 2019 that central banks worldwide held US\$1 trillion of equities, and that one quarter of them planned to further increase their holdings. In May this year, Barron’s also reported that the Swiss central bank held shares in Apple, General Electric, and Disney<sup>4</sup>.

Despite the recent market recovery, there remain interesting opportunities, and your manager is busy putting money to work.

The next newsletter will be written for the period ending 30 September 2020.

Benjamin Koh

### **3. Portfolio Review**

As at 30 June 2020, the Net Asset Value (NAV) of the Fund was USD 77.22. Net of all fees, the year-to-date return was -6.7%.

It was a good quarter for the Fund, recovering most of the losses of 1Q 2020. The portfolio

*Keeping Your Capital Safe*

restructuring continues, and the new additions have contributed positively. As of the date of this letter in mid-August, the portfolio overhaul has been completed, and only one stock remains from a year ago – the Fund has essentially been reborn.

For reference, below are the results of the Fund against its key markets. As the Fund now has material positions in NASDAQ-listed companies, that market is shown also:

Market (Index)	1Q20	2Q20	1H20
Singapore (STI)	-23.0%	4.4%	-19.6%
Hong Kong (HSI)	-16.3%	3.5%	-13.3%
Shanghai (SSE)	-9.8%	8.5%	-2.1%
USA (NASDAQ)	-14.2%	30.6%	12.1%
<b>Fund</b>	<b>-18.9%</b>	<b>15.0%</b>	<b>-6.7%</b>

25 securities made up 98% of the Fund's holdings, with the balance in cash and cash equivalents. NAV values are in Annex I.

To protect the interest of clients, detailed discussion is confined to the client-only version of this newsletter. Client newsletters are embargoed for one year, after which they are made available online.

## 4. Choose Your Parents Wisely

“Choose Your Parents Wisely”: an article in the 25 Jul 2014 edition of *The Economist* explored the class divide in America through the lens of 2 families: an upper-income one versus a low-income one. It made what is already intuitive abundantly clear: the gap in parental resources results in vastly different outcomes for the children in each family.

So too, in the corporate world, do parents influence the lives of their children. Strong corporate parents can start their children off on a sound footing, with little or no debt and plenty of good assets. Weaker parents are not so fortunate: they spin off subsidiaries because they cannot afford to support them further, they may make poor choices on behalf of their

children, and the children may come to market too small, too hungry for capital, and with debt already weighing them down. In a worst-case scenario, less altruistic parents may saddle their offspring with more than their fair share of burdens, or even earn unfair profits at the expense of their children.

Many real estate investment trusts (REITs) are created by owners to offload mature assets in order to recycle capital from lower-yielding investment properties into higher-yielding projects. Case studies abound. The following illustrate just how critical REIT parentage can be.

**Ascendas REIT (A-REIT)** was created in 2002 from buildings developed by Ascendas, a corporation originally wholly-owned by the Singapore government. Under Ascendas, the buildings were managed as part of an overarching national strategy to provide a supportive environment for industries. Rent maximization was not the primary goal.

Therefore, when A-REIT was created, the inherited rental contracts were sometimes at below-market rates. This was especially true in the high-tech business parks, which were essentially office buildings but zoned as “light industry”, allowing desirable tenants like software developers to pay pseudo-industrial rents for office-type space.

As a result, for several years after listing, A-REIT was able to raise rents annually without too much complaint, until its rents were on par with the market. The following table makes clear just how big the gap was during the “catch-up” period:

Year ending 31 Mar	Distribution per unit	% Change
FY04	8.160	
FY05	9.560	17.2%
FY06	11.680	22.2%
FY07	12.750	9.2%
FY08	14.130	10.8%
FY09	15.180	7.4%
FY10	13.100	-13.7%
FY11	13.230	1.0%
FY12	13.560	2.5%

# LIGHTHOUSE ADVISORS

*Keeping Your Capital Safe*

FY13	13.740	1.3%
FY14	14.240	3.6%
FY15	14.600	2.5%
FY16	15.350	5.1%
FY17	15.743	2.6%
FY18	15.988	1.6%
FY19	16.035	0.3%

2008-2009 spanned the global financial crisis, and clearly forced a reset of rents. Once at market rates, rental reversions (as measured by distributions per unit) were clearly far more modest. Still, for a good 5 years, unitholders enjoyed market-beating returns.

Essentially, the Singapore government gave A-REIT a huge “starting out” gift. Of course, there was a larger agenda: the government wanted to create a pool of REITs trading in Singapore, to give its financial markets a boost. A-REIT, as the industrial REIT pioneer, had to put on a good show, which it did.

The government’s gambit worked fantastically well: from just 2 REITs (Capitamall Trust and Ascendas REIT) with a combined market capitalization of S\$1.2 bn in 2002, as of April 2020 there were 43 REITs trading on the Singapore Exchange with a total market capitalization of over S\$100 bn, accounting for over 12% of total stock market capitalization. Singapore is now the third-largest REIT centre in the Asia Pacific, trailing only Japan and Australia, which have much larger stock markets. So it was a huge win-win, for both unitholders and the government alike.

**Soilbuild Business Space REIT (SB-REIT)** appears similar to A-REIT at first glance: a mix of business parks and light industrial buildings. The IPO prospectus from 2013 lists some blue-chip tenants like **Spring Singapore** (a Singapore government statutory board), **Ubisoft**, **Nestle**, **Dyson** and **Hitachi**.

Like A-REIT, SB-REIT was created from buildings developed by its parent, in this case **Soilbuild Group**, a privately owned property developer. (In fact, Soilbuild itself went public in 2004, but it was delisted in 2010 and

subsequently opted to spin off its investment properties as SB-REIT.)

However, the distribution history since IPO has been far less impressive:

Year ending 31 Dec	Distribution per unit	% Change
2014	6.193	
2015	6.487	4.7%
2016	6.091	-6.1%
2017	5.712	-6.2%
2018	5.284	-7.5%
2019	4.220	-20.1%

Compared with A-REIT which posted low single-digit increases in distributions annually during FY14-FY19, SB-REIT distributions fell by high single-digit percentages nearly every year, and in 2019 they sank 20%. This was blamed on a default by a large tenant, NK Ingredients (7% of 2018 net property income). But this was not the first big default: in 2016 its third largest tenant, Technics Offshore (11% of net property income) also defaulted.

It is not that SB-REIT did not have any “good tenants” – the 2019 annual report does list the **Commonwealth of Australia**, **Autodesk**, **Ubisoft** and **Nestle** among its key tenants. But the worst that happens with “good tenants” is non-renewal of their lease, which is part of normal tenant turnover. But “bad tenants” can and do default, and the ability to avoid bad tenants is what separates one landlord from another.

Clearly, since it could not raise distributions for any meaningful period of time, SBREIT did *not* get a “starting out” gift of below-market rental contracts from its parent company. Instead, it seems like it was handed some tenants who were below-market in quality, as evidenced by the defaults and the consequent declines in distributions.

**Sabana Shari’ah Compliant REIT (Sabana REIT)** was listed in 2010. It held 15 industrial properties comprising a mix of high-tech buildings, chemical warehouses, standard warehouses, and general industrial buildings.

# LIGHTHOUSE ADVISORS

*Keeping Your Capital Safe*

Sabana REIT tried to tap a different pool of capital: Shari'ah investors. Perhaps the hope was that the scarcity of Shari'ah compliant instruments would let it trade at lower yields, lowering its cost of capital for acquisitions. Its actual distributions tell a sad tale:

Year ending 31 Dec	Distribution per unit	% Change
2012	9.28	
2013	9.38	1.1%
2014	7.33	-21.9%
2015	6.85	-6.5%
2016	4.64	-32.3%
2017	3.31	-28.7%
2018	3.18	-3.9%
2019	2.92	-8.2%

Given what was discussed about SB-REIT, such large and sustained declines in Sabana REIT's distributions might imply widespread defaults across the portfolio. What happened?

The IPO prospectus reveals that at launch, all the properties save one were under master leases. The REIT owned 23 properties over the years, starting with 15 in 2010, then acquiring 6 in 2012, 1 in 2013 and 1 in 2015.

As of 31 Dec 2019, compared with the original cost, 11 properties had impairments of over 20%, and 7 were impaired by over 33%. This is an extremely poor batting average. No REIT manager gets acquisitions right all the time, but getting it so badly wrong so many times points to a more serious issue.

The master leases hold the answer. Most of the buildings were acquired via sale-leaseback transactions where the owner-occupants agreed to pay agreed-upon rents for a few years. If the rents were above-market, this then implied above-market prices for the buildings. The REIT's valuers were happy to sign off on the deals without proper due diligence on whether the rents were justified. When said leases expired, the lessees demanded a reset of rents to market rates, which in turn forced the REIT to write down the value of the buildings.

The inflated leases were typically 3-5 years long. Once they ran out, the game was over.

Of the 15 buildings the REIT owned at launch, 7 were impaired exactly 5 years after IPO. The aggregate loss was 19%. The REIT acquired another 6 buildings in its second year of listing; one was impaired by 13% just 2 years later, while another was written down 22% after 3 years. Unsurprisingly, both had been master-leased back to the vendors for 3 years.

So the problem for Sabana REIT was not that tenants defaulted, but that it substantially overpaid for nearly half of its buildings. What was the REIT manager up to?

Normally, the REIT manager is expected to own a substantial percentage of the REIT to ensure alignment of interest, but in this case it only owned a 4% stake.

In fact, the Sponsor, **Vibrant Group** (then known as **Freight Links**), owns 51% of the REIT manager. It seeded the IPO portfolio with 5 of the 15 properties, but instead of merely transferring the buildings with their normal leases attached, *it inserted itself as a master lessee between the REIT and the underlying tenants.* The effect was to inflate the rents paid, and thus the market value of the properties.

Vibrant is also a listed company, and its own circular to its shareholders in 2010 outlining the sale-leaseback transactions is telling. It carried the 5 buildings on its own books at S\$91m, but would be selling them to the REIT for S\$193m. Granted, the buildings were valued at cost less depreciation, but even at original cost, they totaled just S\$137m.

Of the 5 buildings Vibrant / Freight Links sold to the REIT, 4 of them remained in the portfolio 9 years later. The REIT paid \$179.5m for them in 2010. As of 31 Dec 2019, they were valued at \$138.7m, a loss of 23%.

So the REIT manager was merely continuing the trend the Sponsor had set in place from the start: sell and lease-back buildings to the REIT, and let unitholders take the hit when rents revert to market rates.

## LIGHTHOUSE ADVISORS

*Keeping Your Capital Safe*

**EC World REIT** went public in 2016. It holds 6 industrial properties in Hangzhou, China, consisting of ports, warehouses and adjacent office buildings.

Year ending 31 Dec	Distribution per unit	% Change
2017	6.025	
2018	6.179	2.6%
2019	6.047	-2.1%

The REIT has been listed for only 4 years, so the distribution history tells us little. Perhaps a look at the tenants may be more informative.

Top 10 tenants as per the 2019 annual report:

	Top tenants	% of gross rent
1	杭州富港供应链有限公司 Hangzhou Fu Gang Supply Chain Co., Ltd.	34.9
2	富春集团控股有限公司 Forchn Holdings Group Co., Ltd	22.3
3	杭州富阳运同电子商务有限公司 Hangzhou Fuyang Yuntong E-commerce Co., Ltd	20.5
4	浙江中烟工业有限责任公司 China Tobacco Zhejiang Industrial Co., Ltd	12.1
5	浙江运通电子商务有限公司 Zhejiang Yuntong E-commerce Co., Ltd	3.9
6	当当网信息技术（眉山）有限公司 Dangdang Information Technology	1.2
7	网赢供应链有限公司 Wangying supply chain Co., Ltd	1.0
8	杭州西联物流有限公司 Hangzhou Xi Lian Logistics Co., Ltd	1.0
9	浙江高阳物资有限公司 Zhejiang Gao Yang Supplies Co., Ltd	0.6
10	湖北京邦达供应链科技有限公司 Hubei Jingbangda Supply Chain Technology	0.4

At a glance, there is already cause for concern: the sponsor is **Forchn Holdings**, and they are

the second-largest tenant, accounting for 22% of the rent, creating a conflict of interest. But it gets worse: **Hangzhou Fu Gang Supply Chain Co., Ltd**, the largest tenant, is a subsidiary of Forchn Holdings, and **Hangzhou Fuyang Yuntong E-commerce Co., Ltd**, the third-largest tenant, is *also* a subsidiary of Forchn Holdings.

In total, the Sponsor accounted for 78% of the REIT's rent in 2019. The Sponsor only owns about 40% of the REIT, creating a moral hazard: in a crisis, it might choose to default on its rental obligations to protect itself, at the expense of unitholders. So far, nothing of that sort has happened. But the case of **Sabana REIT** should be a cautionary tale for investors who encounter REIT-Sponsor master leases.

In conclusion, when evaluating a REIT, investors should take parentage into account. By and large, good parents raise good children. Mediocre parents... have less success. As for parents who take advantage of their children, the problems are self-evident.
